

THE PAPUA NEW GUINEA UNIVERSITY OF TECHNOLOGY
THE DEPARTMENT OF ARCHITECTURE AND CONSTRUCTION MANAGEMENT
SECOND SEMESTER EXAMINATION
BACHELOR OF CONSTRUCTION MANAGEMENT
SECOND YEAR
CM 220 – QUANTITIES & ESTIMATING II

Room: L2
Date: Wednesday 2nd November 2022
DURATION: 3 Hours
Time: 12:50 – 4:00 pm

Instructions to Candidates

1. You have 10 minutes to read the paper.
Do not begin writing during this time.
2. Fill in the Attendance Slip with your name and student I.D. number now
3. **There are four Questions** and you are to **answer all questions**.
4. ALL ANSWERS MUST BE WRITTEN IN THE ANSWER BOOK (S) PROVIDED
and ON THE APPENDIX 2 AND 3.
5. Each question must be answered starting on a New Page.
6. Notes and Textbooks are not allowed in the Test Room.
Only materials allowed and to be brought in by students are;
 - Calculators

WRITE YOUR NAME AND IDENTIFICATION NUMBER CLEARLY ON THE FRONT
PAGE. DO IT NOW!

TOTAL MARKS = 100 MARKS

Question One

[45 marks]

Take off, Abstract and Bill the quantities of the following items only from the attached drawings in Appendix 1.

- (i) First floor framing (Bearer and Floor joist only) [10 marks]
- (ii) Electrical works (Lightings, Switch, GPO only) [15 marks]
- (iii) Roof framing (Rafters, Purlins, Fascia board and Barge board only) [20 marks]

Question Two

[10 marks]

Calculate the all-in-cost of 2400mm x 1200mm x 6mm thick plywood required to construct 1m² of wall.

Data:

- (i) Price per 100 plywood ex-works cost K3,850.00
- (ii) Delivery to site cost K100.00
- (iii) Unloading and stacking i.e. 1¹/₂ hours labourer @ K5.50
- (iv) Waste (breakage and cutting), 10%

Question Three

[32 marks]

- (a) Calculate the labour constant for following item of work; (4 marks)
 - (i) It takes 5 weeks for a gang of 1 tradesman, 2 trade assistance, 2 skilled labourer and 2 unskilled labourer to construct a concrete slab of five (5) buildings with dimension 40m x 20m wide x 200mm thick each. The strength of the concrete is 20 Mpa. (Note: 1 week = 8hours/day x 5 working days +4hours).
 - (ii) It takes 10 weeks for a gang of 1 tradesman, 3 trade assistance, 3 skilled labourer and 3 unskilled labourer to construct 40 number of concrete columns of dimension 650mm x 650mm x 3000mm high. The strength of the concrete is 30 Mpa. (Note: 1 week = 8hours/day x 5 working days +4hours).
- (b) Calculate the charge-out-rate of the following operatives by completing the table in Appendix 2. (20 marks)
 - (i) Tradesman carpenter with an hour rate of K15.00
 - (ii) Trade Assistance Carpenter with an hour rate of K9.50
 - (iii) Skilled Labourer with an hour rate of K7.50
 - (iv) Unskilled labourer with an hour rate of K6.50
- (c) Calculate the gang cost of; (4 marks)
 - (i) Question 3 (a) (i)
 - (ii) Question 3 (a) (ii)
- (d) Calculate the labour cost for constructing; (4 marks)
 - (i) Concrete slab in Question 3 ((a) (i)) using charge out rate in Question 3 (b)
 - (ii) Concrete beams in Question 3 ((a) (ii)) using charge out rate in Question 3 (b)

Question Four

[13 marks]

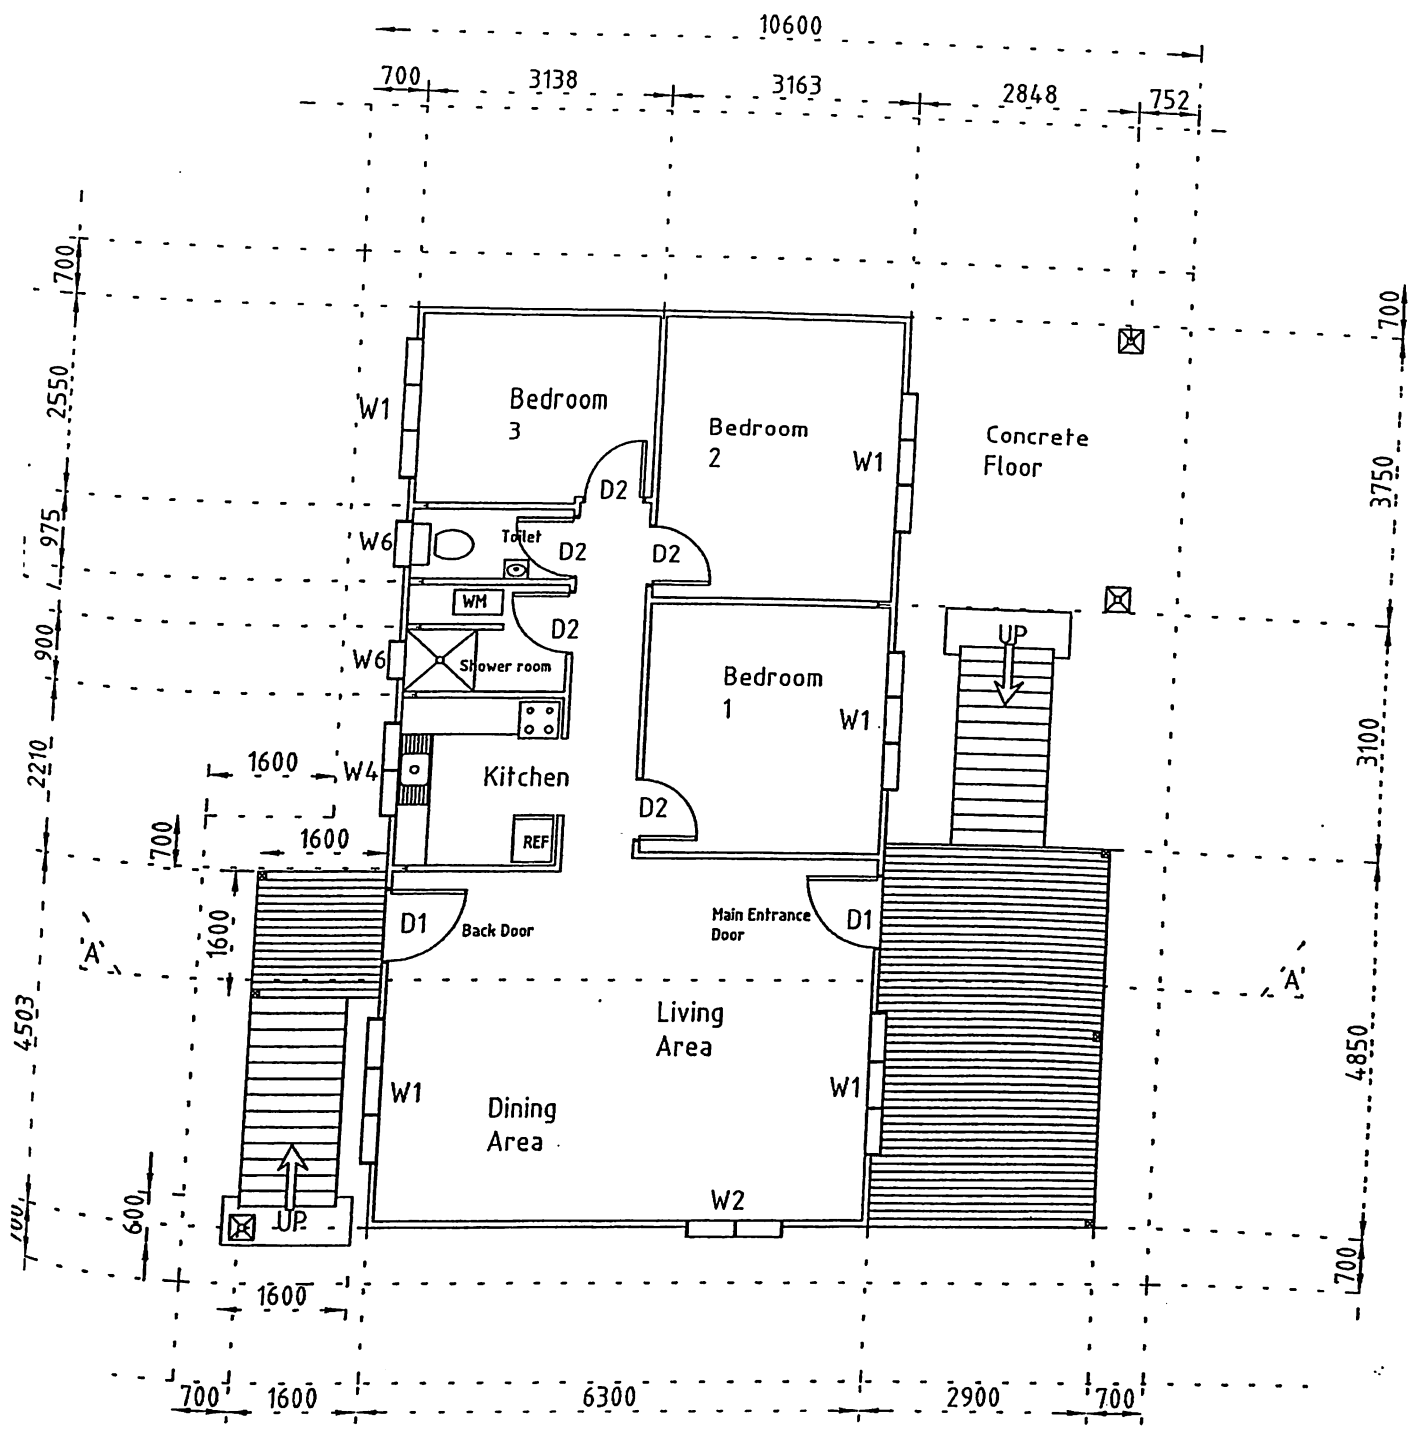

Calculate the hourly cost of owning and operating a concrete mixer by completing the table in Appendix 3 based on the following data;

Purchase price = K40,000
Hours worked per annum = 1100
Fuel @K4.70 per litre

Life of mixer = 4 years
working efficiency = 85%
Lubricant oil, grease @ K7.50 per litre

Appendix 2 [20 Marks]

Calculate the charge-out-rate of the following person

TRADE:	Carpenter		Trade Assistance	Skilled labourer	Unskilled labourer
HOURLY RATE:					
Wages per 42 hour week = K					
Total annual wage = week wage x 52					
Add for workers compensation 3 % = K					
TOTAL WAGE COST PER ANNUM = K					
TOTAL WORKING HOURS PER ANNUM = 42 X 52 =	2184	Hrs	2184	2184	2184
DEDUCTIONS					
Ret weather allowance, 2% =	43.68	Hrs	43.68	43.68	43.68
Annual Leave, 3 weeks =	126	Hrs	126	126	126
Public Holiday, 1 week =	42	Hrs	42	42	42
Sick Pay, 1 week =	42	Hrs	42	42	42
Compassionate leave (That is 24 hrs) =	24	Hrs	24	24	24
Rest Pause, 2% =	43.68	Hrs	43.68	43.68	43.68
Long Service leave, 3% =	65.52	Hrs	65.52	65.52	65.52
TOTAL DEDUCTIONS =	386.88	Hrs	386.88	386.88	386.88
ACTUAL HOURS WORKED PER ANNUM =	387	Hrs	387	387	387
HOURLY COST = TOTAL COST / ACTUAL HRS =	1797	Hrs	1797	1797	1797
ALLOWANCE FOR OVERHEADS AND PROFITS					
Hourly Rate =					
allowance for Overheads					
TOTALS =					
allowance for profit					
FINAL RATE TO INCLUDE ALL ITEMS - CHARGE OUT RATE =					

Appendix 3 [10 Marks]

Calculate the hourly cost of Owning and operating a concrete mixer based on the following data:

- Purchase price _____
- Interest rate _____ X %
- Life of mixer _____ years
- Scrap value at end of life Nil
- Hours worked per annum _____ hours
- Working efficiency _____

Cost of Owning

Annual depreciation = _____ → _____
 Interest on capital, Total repayment is K50,000
 _____ → _____
 Repairs and maintenance, 20% of annual depreciation _____ → _____
 Annual Cost of Owning _____ → _____
 Hourly Cost of owning _____ → _____

Operating Cost

Fuel per 8-hr day, say 7 litres @ K _____ = _____
 Lubricating Oil, grease, say 5 litres per week, 5 litres @ K _____
 = _____

Therefore, Lubricants per day of 5 working days = _____
 Lubricate and fuel per day = _____
 Fuel and Lubricant per hour of the 8 hours = _____ → _____
 Total -----> _____

Working efficiency= _____
Therefore All-in-cost per hour is _____ →
